SUMMARY

Software developer with about 2 years of experience building full stack web applications on the MERN stack. Most of my work is on the backend with Node.js, Express and MongoDB, and I also build React.js and Next.js frontends for the same products. Recent work covers payments, background jobs, real-time tracking and access control.

SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3

Backend: Node.js, Express.js, REST API Design, Socket.IO, BullMQ, JWT, RBAC, MVC/Service Layer

Databases: MongoDB (Aggregation, Transactions, Geospatial Indexes), Redis (Caching, Pub/Sub)

Frontend: React.js, Next.js, Redux Toolkit, React Query, Tailwind CSS, styled-components, Vite, i18next

Integrations: Razorpay, OpenAI API (Function Calling, Structured Outputs), Firebase Cloud Messaging, Google Maps, Ola Maps

Tools: Git, GitHub Actions, Swagger/OpenAPI

Concepts: Authentication & Authorization, Caching, Background Jobs, Responsive Web Design, API Documentation

EXPERIENCE

Full Stack Developer, Volvrit | Delhi | Jun 2025 – Present

- Build complete features on MERN stack products for clients: MongoDB schemas and Express REST APIs on the backend, React.js and Next.js screens on the frontend.
- Improved slow MongoDB queries with proper indexes and aggregation pipelines, and integrated third-party REST APIs and payment gateways behind JWT authentication.
- Added Redis caching to the slowest read-heavy endpoints, which cut response times by about 40% and helped the APIs scale under peak traffic.
- Moved notifications, invoice generation and other slow tasks out of the request cycle into BullMQ queues, and used Socket.IO for live updates.
- Led the migration of core modules to TypeScript; type errors that used to reach production dropped by roughly 30%.

Product & Website Development Intern, Partspick.in | Delhi | Apr 2024 – Oct 2024

- Built and customised storefront pages in HTML, CSS and JavaScript, and cut the add-to-cart flow from 8 steps to 4.
- Tracked AOV, TAT and NPS and used them to decide which UI changes to ship.

PROJECTS

CafeCold – Cold-Chain Logistics Marketplace | Sole backend owner

Node.js, Express.js, MongoDB, Redis, BullMQ, Socket.IO, Razorpay

- Built the whole backend on my own: 260+ REST APIs across 20+ modules, documented in Swagger/OpenAPI.
- Simultaneous bookings could take a customer over their credit limit, so I made the credit check and deduction a single atomic update and recorded every movement in a double-entry ledger that GST invoices are generated from.
- Shipments move through a state machine with automatic transporter reassignment, and customers see live GPS location over Socket.IO.

OG Roti – Multi-Branch Food Delivery System (customer, driver & admin apps) | Backend developer

Node.js, Express.js, MongoDB, Redis, BullMQ, Socket.IO, Razorpay

- Debugged duplicate orders in production caused by customers double-tapping checkout; fixed it in the database with a unique partial index rather than locks in application code.
- Nearest-branch assignment with geospatial queries, BullMQ jobs for order timeouts, and JWT auth with refresh-token rotation, OTP login, 2FA and per-branch data isolation.

SHIQU – Workforce Scheduling Platform | Backend engineer

Node.js, Express.js, MongoDB, Redis, OpenAI API

- Multi-tenant scheduling backend with an auto-assign engine that respects shift and availability constraints, plus an end-to-end test suite covering the main scheduling and permission flows.
- AI assistant built on OpenAI function calling with read-only tools and strict JSON-schema outputs; simple questions go through a smaller prompt so most replies stay fast.

BandhanGuru – Wedding Services Marketplace | Frontend

React.js, Redux Toolkit, i18next, Tailwind CSS

- Multi-role web app with role-guarded routes, Razorpay checkout and map-based vendor search, available in 14 languages; wrote a small script to catch missing or broken translations before release.

Job Portal Web App | Full stack

React.js, Node.js, Express.js, MongoDB

- Role-based login for candidates and recruiters, job posting, application tracking and an admin dashboard.

Real Estate Property Portal | Frontend

Next.js, TypeScript, Tailwind CSS

- Responsive property listings site with search filters, detail pages, a channel-partner listing flow and a lead dashboard.

EDUCATION

Bachelor of Computer Applications (BCA), Invertis Institute of Engineering & Technology, Bareilly | 2022 – 2025
